No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Published Applications NA:*

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

AL492464 AL492464 AL492464 AL492464 AL492464 AL492464 AL49266 AL49266 AL49266 AL4926	Cambridge CB10 1SA, B-mail: barrell@sanger.ac.uk nhl@sanger.ac.uk Constructed at the Institute for Genomic Research Rockville, MD. Genomic DNA isolated from a cloned Rockville, MD. Genomic DNA isolated from a cloned rypanosoma brucei (TREU927/4 GUTat 10.1) was med to give a tight size distribution (to give a tight size distribution (described in detail in Smith, H. and Venter, J.C. insert libraries for whole genome shotgun sequenc Genome Sequencing: A practical Approach, eds. M. Barrell, Oxford University Press, 1999). Email: nelsayed@tigr.org Details of T. brucei sequencing at the Sanger Cer at http://www.sanger.ac.uk/Projects/T_brucei/.

Genomic DNA isolated from a cloned population of
Trypanosoma bruce; (TREU327/4 GUTat 10.1) was mechanically
sheared to give a tight size distribution (approx 2 kb).
The v + imethod used for the library construction is
described in detail in Smith, H.O. and Venter, J.C.
(Making small insert libraries for whole genome shotgun
sequencing projects. In Genome Sequencing: A Practical
Approach, eds. M. Vaudin and B. Barell, Oxford University
Press, 1999)."

Site_2: Not I; The library was constructed according
Bonaflo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site bould strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGAGACAG. This library was created for the University
lows Brain Anatomy Project (BMAPP): 'denn Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
